

MT-Gu Wire Harness Plug-in Kit

Part Number: TR-EN-MTGU-6W-02

Product Sku: IM010016

Revision: Nov 1, 2014

Synopsis: Simple plug-in installation for Enfora® MT-Gu into automotive vehicles with OBD II connector and MINI/ATM fuses. No splicing/soldering required.

Installation: Remove a fuse on an accessory circuit and plug the fuse connector wire into one leg of the fuse holder (preferably the side of the fuse holder that remains at 12 VDC when the fuse is removed). Plug the loose fuse connector into the other leg of the fuse holder. Plug the fuse back into the fuse connectors of the wire harness. Plug in the OBD II connector. The OBD II can be disconnected when vehicle service is required and then reconnected after service is completed. If MT-Gu loses supply power when certain accessories are activated, a different accessory circuit needs to be selected.
